Farmer Script and Screen App Demo EN

This is the script that was used in the Farmer App Training video along with screenshots of what the script is explaining for visual aids. You can use this document to quickly look up key parts of the training, to help you answer questions you may have about the functions of the app.

Script	Screen
Welcome to the Manejo de Huertas app training video. Today we will show you the different features of the app including how to keep track of your crops on the app, how to report and log plagues on the app, and the email notification system which sends you reminders of tasks to complete for your crops, from planting the seeds to harvest.	
How to login to your account for the first time	
Before you log into your account for the first time, you will receive an email from Manejo de Huertas. You cannot create an account without this email. The email will ask you to finalize your registration. Click on the green button or copy and paste the link into your browser to create your account.	You will be brought to this page through the link. Here you will put in your first and last name, create a password, and confirm your password. Note that this account will be linked to the email that you received the registration invitation from. Once you have inputted the information, press the green button down here that says "Registrarse".	
You will be brought to this page and a notification will pop up at the bottom letting you know that your account has been created and you can login. Put in the email address for your account and your password to login. If you ever forget your password, there is an option down here to reset it. If you need help resetting your password, we will go into more depth on how to do this at the end of the video demo.	
This is the page you will land on. A garden will have already been created for you with your address and name. Click on your garden to start adding crops.	On this page you have two tabs at the top. On the “Camas de cultivo” tab you can add garden beds to your garden.	On the “Información general” tab there will be your name and address information.	How to create a bed in your garden	
To create a bed in your garden press on the “Nueva cama de cultivo” button on the right. You can then give a name to your bed and specify the location of your bed if desired.	How to add a new crop to your bed	
Now that a bed has been created, we have access to add a crop to the bed. Press on the green button on the bottom left side that says “Iniciar nueva plantación” to create a crop.	
Put in the day that you are starting to plant your seeds and toggle through the list of crops to choose which crop you are growing. Press “Guardar” to continue.	The bed will now be populated with information for the crop you are growing. On the right you have the option to put a seed ID and plantation number. The plantation number refers to how many times a particular crop bed has been used for planting the same crop. If you have a bed where you first planted tomatoes and harvested them, and then planted tomatoes again in the same bed after harvesting, the plantation number would be 2.If you planted a different crop, such as cucumbers, after harvesting tomatoes, the plantation number would reset to 1 for the cucumbers. You can come back and input that information at any time. If you run into delays at any point while you are growing your crop, you have the option down here to put the number of days you are late. When you add days of delay, it automatically changes your expected end of harvest day here to the right. This date given here is when you can expect to be finished growing and harvesting your crop. If you make any changes, make sure to press the “Guardar” button in the bottom right corner to save any changes before logging off.	How to log your harvests	
Whenever you harvest some plants in your crop, you can keep track of the amount using the “Cultivar” button. Here you put the day that you completed the harvest, the quantity you harvested, and the units you measured this in. For the unit of measurement you can choose between milligrams, grams, kilograms, liters, or cubic meters. Press the “Guardar” button to save.	How to delete your crop once the harvest has finished	
The last button at the bottom can be used once you have finished your last harvest before you start growing a new crop in the bed. Before deleting the bed, make sure you have inputted the quantity of your final harvest in the “cultivar” tab. When you click on this button you need to confirm that you have recorded all the crops grown in the bed and that you are aware that you will not have access to this bed anymore.	
Once you submit this, you are prompted to answer whether you are destroying the bed due to a plague or not. Select the option that applies to your bed.	Then, you are able to start a new crop in your bed by pressing the button down here.	How to report a plague in your garden	
Another feature that you have on this page is the ability to report and keep track of plagues and diseases happening in your garden.	Press on “Reportar plaga” to report a plague. Select the plague you suspect it is and the date you first noticed it. Then, upload a picture here so you can keep track of any changes and developments. For the progress section, since it is your first time reporting the plague you would select “nuevo” from the dropdown bar. You can leave any notes in the comment section if desired. You are also able to leave notes about the measures you have taken to fight the plague at the end, so you can keep track of any plague control measures you have taken. Press “Guardar” when you are done completing the form.	Now the plague report appears on the screen. If you want to go back and edit it, you can press the pencil icon next to the report. Or, you can delete the report if it was made by mistake by pressing the garbage icon. If a new progression occurs with the plague, you can keep track of it by pressing the “Nueva plaga en progreso” button at the bottom.	
Select the date you are observing the plague progression and upload a picture of it. Then, select if the plague has gotten better, gotten worse, if it is gone, or if it has destroyed the crops. You can also write more notes and the measures you have taken to combat the plague, like in the first plague report.	Email notification system	
Now you know how to work all the features of the app including how to start a bed in your garden, how to log your harvests, how to end your crop bed after your last harvest, and how to keep track of plague progressions in your bed. Although, we have not yet covered one of the coolest features of the app, which is the notification system! Once you have created a bed and selected a crop, you will get tailored notifications to your email with tasks that must be completed to care for your crop. When you have a new task to complete, you will receive a notification via the email associated with your account. In this email it will specify what bed needs to be tended to and the specific tasks that must be done that day.	
How to reset your password	
If you have forgotten your password and need to reset it, press on the “Olvidé mi contraseña” button on the login screen. You will be brought to this screen and prompted to put in your email address. Use the same email address that is connected to your account.	You will receive an email that looks like this. Follow the link to reset your password.	

You will be brought to this screen and here you are able to reset your password. Once it is reset, you can log into your account with your new password.	
This brings us to the end of the Manejo de Huertas video demo. Thank you for following along and happy gardening!
